

GEOL 121 Physical Geology Lab

Instructor: Sean Bryan

Course Description:

- GEOL 121 is a one-credit, stand-alone laboratory course that will provide you with a hands-on introduction to geology using the strengths of our local setting along the mountains of the Colorado Front Range.

Learning Outcomes:

- Expose you to relevant topics in geology so you can learn about the Earth by doing what geologists do.
- To familiarize you with local geology so you can interpret the landscape by understanding the geological processes that create varying topography.
- To introduce you to rates of change and rates of flows of materials so you understand Earth's great antiquity and geologic processes at different scales.
- To provide you with an understanding of how human actions influence certain aspects of Earth's major spheres.
