

# **GEOL 122 The Blue Planet: Geology of Our Environment**

Instructor: Michael Ronayne

## **Course Description:**

- In this course you will learn about the physical nature of the Earth, its materials, its external and internal processes, and how human activities affect the Earth system.

## **Learning Outcomes:**

- Observe different landscapes and interpret the rock type and geologic history
- Analyze a geologic setting and identify the potential geologic hazards
- Draw connections between geology and human actions.
