

## **GEOL 454 Geomorphology**

Instructor: Ellen Wohl

### Course Description:

- This course uses lectures, laboratory exercises, and field trips to examine the processes that create diverse landforms, including those characteristic of hillslopes, drainage basins and river channels, glacial and periglacial regions, deserts, and coastlines.

### Learning Outcome:

- Understanding of Earth surface processes and landforms
- Experience in scientific method (posing and testing hypothesis, collecting and analyzing data, reporting results).
