**Lynx Monitoring Photo Technician (1)** needed from early July through September to help Colorado Parks and Wildlife import, organize, identify, and re-deploy remote cameras deployed for ongoing Canada lynx monitoring efforts in Colorado. Specifically, we are seeking 1 technicians who will be enrolled in either Session 1, 2, or 3 of NR220. We will dovetail employment on this project with your enrollment in NR220 so that you can work as a technician during the balance of summer when you are not at Mountain Campus. The position will turn to part time and we will work around your course schedule once Fall Semester begins.

The successful applicant will be responsible for collecting cameras from agency biologists, potentially retrieving cameras from the field, then executing the daunting task of organizing and identifying species within the ~150,000 photos we expect to collect. Position demands persistence, independence, and attention to detail. This is an office position with flexible hours and work location, but limited field opportunities. Need driver’s license and social security card for employment with CPW. Salary $14-$15 per hour. To apply email cover letter, resume, and references to Jake.Ivan@state.co.us. Closes April 17, 2020.
