

Minor in Diversity and Inclusion in Natural Resources

Overview

The Minor in Diversity and Inclusion in Natural Resources embraces human diversity and inclusion in natural resources fields through exploration of of how complex and important aspects of diversity serve to shape natural resources and the environment in our modern era. The minor serves students already passionate about environmental issues by investigating counter-narratives not often thoroughly discussed in seminal works of natural resource history. It provides for a critical examination of historical and current relationships between human diversity, natural resources, and the environment.

Students will develop an understanding of the importance of, and types of, diversity in human-environment interactions; how this diversity contributes to vulnerability and/or resilience to environmental change; and the barriers and opportunities for recognizing and protecting human diversity in the context of natural resource conservation and management. The curriculum provides students with the knowledge and skills needed to address diversity and inclusion issues within natural resource disciplines. This includes proposing solutions to environmental injustices, facilitating intercultural environmental communication, integrating multicultural perspectives in the assessment of natural resource issues and development of policy and management solutions, and cultivating a deeper understanding and respect for diverse ways of knowing and experiencing the environment.
